Introduction

This document has been produced to offer advice and suggestions on how to rectify the various errors/warnings that may be generated when producing the School Census 2009 returns in England. It covers the Spring, Summer and Autumn 2009 returns.

We strongly recommend carrying out dry runs in order to ascertain which errors need correcting. You can make use of the direct links from the **Validation Errors Summary** (displayed after validating the School Census return) which enables you to open the SIMS record that requires correcting/amending.

We also recommend making use of the Bulk Update functionality within SIMS to identify missing/invalid data and correct in bulk. For more information, please refer to the applicable *Preparing for the School Census 2009* guide, i.e. the *Primary/Middle Deemed Primary, Nursery and Special Schools* or the *Secondary/Middle Deemed Secondary Schools* version. Both are available on the SupportNet website (<http://support.capitaes.co.uk>) by entering **CENSUS09** in the **Site Search** field on the Home page and clicking the **Go** button).

This document has been produced to help users check and correct School Census errors and has been provided in addition to our usual user documentation (handbooks and online help). It has not however, been possible to fully check the accuracy of this document within acceptable timescales. To prevent any delay in releasing this document, we have therefore decided to release it following minimal checking. If you find any errors or inaccuracies in this document, please report them to publications@capita.co.uk.

Using the Validation Errors Summary

Having created and validated a School Census return, the **Validation Errors Summary** is displayed. The Summary lists all the validation errors and warnings generated by the return. Errors must be corrected whilst warnings should be checked and corrected if applicable.

Column	Description
Type	Displays the type of validation rule: <ul style="list-style-type: none"> Failure (F displayed in red) indicates an error, which <u>must</u> be corrected. Query (Q displayed in black) indicates that there are unusual data conditions. These should be considered and corrected if necessary.
Sequence	Shows the error number.
Message	Displays the text of the error message.
Location	Lists the specific record containing the error.
Solution	Provides a suggestion on how the error can be corrected.

To assist in the resolution of any errors and warnings:

- Use the search facility to filter by error/warning number by selecting the required number from the drop-down list.
- Use the scroll bars to view all the errors/warnings. By default, failures are displayed first in the list.
- Check the **Solution** column for suggestions on where and how failures can be corrected. When the pointer is hovered over any cell in that row, it changes to a hand if a hyperlink is available to the appropriate area of SIMS. A # symbol preceding the solution also indicates the existence of a hyperlink. Click anywhere in the row to display the specific area in SIMS where the record(s) can be checked/corrected.
- Change the order of the summary by clicking the appropriate column heading. If required, change the width of the columns by dragging the dividing line between the column headings until the required size is achieved.
- Print a summary of error/warnings by clicking the **Report** button, noting that a high number of errors will generate a high number of printed pages. The summary is displayed in a web browser, e.g. Internet Explorer, from where it can be transferred to another application. Right-click, then select the required option, e.g. **Export to Microsoft Excel** from the drop-down list.

The errors listed are displayed until they are corrected and the validation routine is run again.
